Time: 9:00pm

Discussion Points:

- Fixed api Bug and now working for weather module **(Josue)**
- The Spectrum wifi network went down in my neighborhood because of the weather at my house so I didn't have too much time to work on the project because I couldn't connect to ssh and finish the last bits of the module. Will work on it more Monday and submit a merge request monday once wifi is back. **(Josue)**
- Looked over some recent code you pushed on the disc module and looked good so far with the web scraping and getting news from reddit. **(Josue)**
- Finished functionality of r/DiscGolf fetching. **(Michael)**
  - Needs some styling/css formatting done - but not super high priority. Saving towards the end of the project.
- Started web-scraping tournament scores. **(Michael)**
  - Not a ton of progress, but it's been moving along well so far. Should be able to finish by next week. Maybe a few extra days at worst.

Goals for next week (include responsibilities)

- Create merge request **(Josue)**
  - Look over merge/pull request **(Michael)**
- Take a video of the magic mirror working for next week to show functionality **(Josue)**
- Finish web-scraping functionality **(Michael)**
  - Formatting is not a big concern at the moment
