Team name: Team SmartMirror

Members present: Michael Dykema, Josue Nunez

Date: 11/1/2020

Time: 9:00pm

Discussion Points:

- Midterm presentation went well
  - Go team! Good teamwork making it come together.
- Worked on gathering data for the weather module and finding some potential api's for the use. MeteoMatics or OpenWeatherMap **(Josue)**
- Began to work on user interface and have icons for sunny and rainy days for the weather module and created buttons as well as settings windows. Need to finish the functionality for picking certain cities and saving them and being able to swap through them.
- Need to move some modules around on the screen to fit the display if we want the mirror vertical or horizontal.
  - Think this might be able to be done in config?
  - May be worth having vertical or horizontal be a custom setting
- Close to finishing r/DiscGolf portion. Should be wrapped up this week and can get started on tournament scores **(Michael)**
  - Will merge branch after this portion is finished
  - Going to need to do a little more research on web-scraping

Goals for next week (include responsibilities)

- Finish the user interface and jbuttons to get module prepared for testing as well as get more icons for certain weather such as cloudy and snow**(Josue)**
- One side of the frame didn't fit with the display and mirror so I'm going to have to buy some more wood to cut into the correct dimensions. **(Josue)**
- Finish r/DiscGolf portion and merge into master **(Michael)**
- Research and start tournament scores **(Michael)**
